

Correlation tables
between EN 81-20:2020 and (EN) ISO 8100-1:2026
and
between EN 81-50:2020 and (EN) ISO 8100-2:2026

(EN) ISO 8100-1:2026 and (EN) ISO 8100-2:2026 contain lot of technical and editorial changes compared to EN 81-20:2020 and EN 81-50:2020 (corresponding ISO 8100-1/2:2019) standards. Also structure of the standard and consequently the clause numbering has changed.

Purpose of this document is to help readers to find the clause text changes and corresponding content when comparing the standards.

Using this document, readers can

- Find correlation between clauses in ISO EN 81-20/50 and ISO 8100-1/2
- See whether clause has changed, deleted or added
- See if a separate introduction presentation provides further information

Document covers clause text of the requirements.

Comparison of Tables, Formulas and Figures are excluded.

Following parts of the standards are excluded or showed only in high level: Introduction, Scope, Annex(es) and Bibliography.

This document is aimed to be used as a help when finding correspondent requirements in the standards.

Document focuses to show the most relevant and important correlations. For practical reasons, document does not show all possible changes.

This document may not be used for setting any limitations, interpretations or used as a guide for application of the standards.

The reader is solely responsible to familiarize himself/herself with the actual clauses and text of the (EN) ISO 8100-1:2026 and (EN) ISO 8100-2:2026 for complete and accurate understanding of the changes and the formulation of the requirements.

Clause has been marked as

"Not changed" when clause text has not changed.

Clause title (header) or clause number changes are ignored.

"New" when corresponding requirements are not in the previous standards (EN 81-20 or EN 81-50)

"Changed" when the actual clause text has changed.

- If only clause number or clause title has changed, it is not marked as "Changed".

Note: It has not been evaluated, whether change is editorial (wording) or technical (changing the actual meaning).

All clause text changes are marked as "Changed"

"Deleted" when new standards ISO 8100-1/2 do not contain the requirement shown in previous standards (EN 81-20 or EN 81-50)

"Header only" when clause has only title, without direct clause text. Changes are not evaluated.

"More info" when a separate "Introduction to main changes" document gives further information.

5.14.2.1	Hard pendulum shock device	4.16.2.1	Hard pendulum shock device				X							
5.14.2.2	Soft pendulum shock device	4.16.2.2	Soft pendulum shock device				X							
5.14.2.3	Suspension of the pendulum shock device	4.16.2.3	Suspension of the pendulum shock device				X							
5.14.2.4	Pulling and triggering device	4.16.2.4	Pulling and triggering device				X							
5.14.2.5, 5.14.2.5.1	Test samples	4.16.2.5	Test samples				X							
5.14.2.5.2									X					
5.14.3	Tests	4.16.3	Tests							X				
5.14.3.1		4.16.3.1					X							
5.14.3.2		4.16.3.2					X							
5.14.3.3		4.16.3.3					X							
5.14.3.4		4.16.3.4					X							
5.14.3.5		4.16.3.5		X										
5.14.3.6		4.16.3.6		X										
5.14.4	Interpretation of the results	4.16.4	Assessment of the test results				X							
5.14.5	Test report	4.16.4	Assessment of the test results				X							
5.15	Electronic components - Failure exclusion	4.17	Electrical and electronic components — Fault exclusion				X				X			
5.16	Design rules for programmable electronic systems (PESSRAL)	4.18	Design rules for SIL-rated circuits				X					X		
-		4.19	Verification of the tripping element							X		X		
-		4.19.1	General Provisions		X									
-		4.19.2	Check of the characteristics of the tripping element							X				
-		4.19.2.1	Testing							X				
-		4.19.2.1.1	Test method		X									
-		4.19.2.1.2	Test procedure		X									
-		4.19.2.1.3	Assessment of the test results		X									
-		4.19.3	Instructions		X									
Annex A	Model form of type examination certificate								X					
Annex B	Programmable electronic systems in safety related applications for lifts (PESSRAL)	Annex A	SIL-rated circuits				X					X		
Annex C	Example for calculation of guide rails	Annex B	Example for calculation of guide rails				X					X		
Annex D	Calculation of traction – Example	Annex C	Calculation of traction — Example				X							
Annex E	Equivalent number of pulleys Nequiv - Examples	Annex D	Equivalent number of pulleys, Nequiv — Examples				X							
Annex ZA	Relationship between this European Standard and the essential requirements of Directive 2014/33/EU aimed to be covered	Annex ZA	Relationship between this European Standard and the essential requirements of Directive 2014/33/EU aimed to be covered				X
